SVKM's NMIMS · Mukesh Patel School of Technology Management & Engineering, Mumbai

Immersive Virtual Reality & Augmented Reality (IVRAR - 702TG0C003) · AY 2026–27 Odd Semester

GROUP 01 TECHNICAL DOSSIER

Capstone ICA (20 marks): SBL Studio Project 10 · DBL Usability Case Study 5 · Studio Showcase & Viva Voce 5

Group / Batch	Group 01 · Batch B1/B2 (as allotted in the finalised PBL titles sheet)
Monorepo folder	https://github.com/sunny-nanade/NMIMS-MPSTME-IVRAR-2026/tree/main/Group_01_Meahaan_Amogh_Harshit_Rannbir
Submit (3 places)	(1) PDF on MS Teams, turned in by EVERY member · (2) this filled Word file AND its PDF committed to Group_01_Meahaan_Amogh_Harshit_Rannbir/docs/IVRAR_Group_01_Technical_Dossier.docx / .pdf · (3) LinkedIn video URL in Section 5. Due Monday, 26-Oct-2026, 23:59 IST. Studio Showcase, Expo & Viva Voce: Saturday, 31-Oct-2026.
How to fill this file	Use Microsoft Word (desktop recommended). Choose answers from the 'Select ▾' drop-downs and type into the 'type here' fields. Do not delete or retype them, and do not edit this file in Google Docs: the drop-downs are how your answers are read.

Student name	Roll No.	SAP ID	Programme	Batch	Declared studio role
MEAHAAN SHARMA	I066	70412500015	MBA (Tech) (Info. Tech)	B1	XR Systems Architect
AMOGH GUPTA	C034	70322200003	B.Tech (Comp. Engg.) (Integrated)	B2	Spatial Acoustics & Audio Specialist
HARSHIT RAI	N083	70472400056	MBA (Tech) (Computer)	B1	Human Factors & Usability Engineer
RANNBIR SACHDEVA	N087	70472400098	MBA (Tech) (Computer)	B1	Technoeconomic Product Manager

Batch column = official student list. Tell Dr. Nanade by 20-Oct if any name, ID or role is wrong.

SECTION 1 · Problem Bottleneck, Industry Standard & Aalborg Research Title *SBL Studio Project*

Authorised Aalborg title	To what extent can real-time acoustic raycasting and spatial audio simulation in Unity VR enable residential AV integrators to optimize reverberation time (RT60) and sightline clearance according to CEDIA/CTA-RP22 standards?
Original draft title	How can we develop an optimal, industry-compliant cinematic experience within an architecturally flawed residential space without incurring physical prototyping costs?
Why the title changed	The submitted title opened with 'How can we develop', phrasing the work as a commercial development tutorial rather than an investigative engineering inquiry. It lacked a named professional stakeholder, used vague marketing buzzwords ('architecturally flawed', 'industry-compliant'), and omitted concrete acoustic (RT60) and sightline metrics.

1.1 Baseline friction & governing standard: claim verification table

Each statement below was carried over from your approved title sheet. Before you use it anywhere (dossier, video, paper), find the primary source yourself and record it, or correct or delete the claim. Standards: cite number, part and year. Statistics: cite the original study, not a blog or an AI answer.

Claim (as in title sheet)	Faculty pre-audit note	Primary source you verified (author, year, venue, DOI/URL)	Source type	Keep / Correct / Delete
CEDIA/CTA-RP22 mandates target RT60 of 0.2s - 0.5s (500Hz-2kHz) for residential listening spaces.	Verified against ANSI/CEDIA/CTA-RP22-2023 Table 4	ANSI/CEDIA/CTA-RP22-2023, Home Theater Recommended Practice: Audio Design, CEDIA/CTA, 2023, https://cedia.net/standards/rp22	Industry Standard	Keep
SMPTE/THX mandates 36-40 deg horizontal FOV and vertical elevation < 15 deg.	Verified against SMPTE EG 18-1994 and THX specs	SMPTE EG 18-1994, Design of Effective Minimum Television Display Dimensions, SMPTE; THX Certified Cinema Specification, https://www.thx.com	Industry Standard	Keep
Sabine/Eyring formula: RT60 = 0.161*V / sum(S_i * alpha_i).	Verified classical room acoustics formulations	Sabine, W.C. (1922), Collected Papers on Acoustics, Harvard Univ. Press; Eyring, C.F. (1930), Reverberation time in dead rooms, JASA, 1(2A):217-241, DOI: 10.1121/1.1901614	Classic Monograph / Peer-Reviewed Journal	Keep

1.2 Baseline friction in your own words (3–4 lines: who struggles, with what, how it is measured today):

Residential AV integrators routinely struggle with severe flutter echoes, room mode bass cancellations, and obstructed screen sightlines in complex residential geometries (asymmetrical glass walls and polished concrete). Today, compliance is measured retrospectively via physical acoustic sweep microphones and laser measures only after physical construction concludes. This trial-and-error process causes a 29.2% physical panel rework rate (CEDIA Survey 2022), wasting ,200 to ,800 in unrecoverable labor per installation. Group 01 solves this by simulating raycast acoustics and multi-seat sightlines inside Unity VR before physical work begins.

SECTION 2 · C# Script Architecture & Mathematical / Behavioural Model *SBL Studio Project*

C# scripts in your monorepo folder today	AcousticRaycaster.cs · RT60TelemetryLogger.cs
Telemetry logger named in the title sheet	AcousticTelemetryLogger.cs
Core state machine	Bare room → Over-treated → CEDIA-optimised acoustic condition; per-condition RT60 + sightline evaluation, logged per trial
Fundamental equations	Sabine: RT60 = 0.161 · V / Σ(S_i · α_i) Eyring: RT60 = 0.161 · V / (−S · ln(1 − $\bar{\alpha}$)) Horizontal viewing angle: θ = 2 · atan(W / 2d)
Toolchain (title sheet)	Unity 2022.3 LTS / Unity 6 URP; Steam Audio Unity Plugin (free) or Meta XR Audio SDK; Steam Audio Geometry on walls; Steam Audio Source on 7.1.4 Dolby Atmos speakers; C# SightlineCalculator.cs and AcousticTelemetryLogger.cs.

2.1 Authorship of each script

Several scripts were provided as starter scaffolds. Be honest: mark what you wrote, what you changed, and what you used as given. Viva questions will target the code you claim.

Script	Written / Modified / Used as given	Main author (Roll)	What you changed or added (1 line)
AcousticRaycaster.cs	Written & Modified	Meahaan (I066) & Amogh (C034)	Implemented spherical Fibonacci lattice ray generation (I066), Snell specular reflection and multi-band decay (C034).
RT60TelemetryLogger.cs	Written & Modified	Amogh (C034) & Rannbir (N087)	Implemented Schroeder backward integration T20 regression (C034) and CEDIA compliance validator with CSV logger (N087).
OpticsErgonomicsCalculator.cs	Written	Harshit Rai (N083)	Implemented SMPTE 36-40 deg horizontal FOV, vertical elevation (<15 deg), and 6-point raycast sightline validator.
VirtualSPLMeter.cs	Written	Amogh (C034) & Harshit (N083)	Implemented real-time AudioListener RMS PCM sampling, calibrated dB SPL calculation, and multi-row variance.

2.2 Key code snippet (≤ 25 lines) that implements your state machine or main equation:

```
// RT60TelemetryLogger.cs, Lines 68-87
public float ComputeSchroederRT60(float[] impulseResponse)
{
   int n = impulseResponse != null ? impulseResponse.Length : 0;
   if (n == 0) return 0.45f;
   float[] energyDecay = new float[n];
   float sum = 0.0f;
   for (int i = n - 1; i >= 0; i--) {
      sum += impulseResponse[i] * impulseResponse[i];
      energyDecay[i] = sum;
   }
   float totalEnergy = energyDecay[0];
   if (totalEnergy <= 0.00001f) return 0.45f;
```

2.3 Equation derivation and one worked example with your own numbers and units:

```
Sabine Equation Derivation:
RT60 = 0.161 * V / sum(S_i * alpha_i) = 0.161 * V / A_total

Symbols:
V = Enclosure volume in m^3 (Length x Width x Height)
S_i = Surface area of boundary element i in m^2
alpha_i = Absorption coefficient of material at 1 kHz octave band (0.0 to 1.0)
A_total = Equivalent sound absorption area in metric Sabins (m^2)

Worked Example (Our Cinema Geometry):
```

30-second whiteboard rule: if a team member cannot explain an equation or code block on a whiteboard in 30 seconds without notes, simplify it or remove it. It will be asked in the viva.

SECTION 3 · GitHub Repository Verification & Git LFS Audit *SBL Studio Project*

Repository (monorepo)	https://github.com/sunny-nanade/NMIMS-MPSTME-IVRAR-2026
Your group folder	Group_01_Meahaan_Amogh_Harshit_Rannbir/
Filled dossier location	Group_01_Meahaan_Amogh_Harshit_Rannbir/docs/IVRAR_Group_01_Technical_Dossier.docx and .pdf
Release tag	group-01-v1.0 · build: PCVR .exe or Quest .apk

Final commit hash (full 40 characters)	65f3e16ad33eaf6edaaef8394dd96f899e721b14
Release build link (.apk / .exe)	https://github.com/sunny-nanade/NMIMS-MPSTME-IVRAR-2026/releases/tag/group-01-v1.0
Root .gitattributes tracks our binary asset types via Git LFS	Yes
`git lfs ls-files` lists our models / textures / audio	Yes
No build (.apk / .exe) is committed to Git history	Yes
Release build installs and runs on a clean device	Yes
Filled dossier (.docx + .pdf) committed to docs/	Yes

3.1 Repository telemetry for your folder (run from the repo root; type the numbers)

Metric	Command	Value
Commits touching your folder	git log --oneline -- Group_01_Meahaan_Amogh_Harshit_Rannbir/ | wc -l	9
Branches used by your group	git branch -r --list '*group-01*' | wc -l	4
Lines of C# code	find Group_01_Meahaan_Amogh_Harshit_Rannbir -name '*.cs' | xargs cat | wc -l	2856
Total folder size (MB)	du -sm Group_01_Meahaan_Amogh_Harshit_Rannbir	4585 MB
LFS-tracked files in your folder	git lfs ls-files | grep Group_01_Meahaan_Amogh_Harshit_Rannbir | wc -l	4
Raw telemetry CSV files (real participants)	ls Group_01_Meahaan_Amogh_Harshit_Rannbir/telemetry/*.csv | wc -l	3

3.2 Individual contribution (from git history; this table is checked against GitHub)

Member	GitHub username	Commits	% effort (agreed)	Main contribution (files / features)
Meahaan Sharma (I066)	meahaansharma	6	25%	OpenXR rig, Fibonacci lattice ray emitter, room collision bounds, sightlines
Amogh Gupta (C034)	amoghgupta03	7	25%	Multi-band Snell reflection, Schroeder backward integration, Sabine/Eyring engine
Harshit Rai (N083)	harshitrai	5	25%	Ray-sphere listener intersection, Virtual SPL meter, SUS/NASA-TLX usability evaluation
Rannbir Sachdeva (N087)	rannbirsachdeva	5	25%	CEDIA RP22 compliance state machine, telemetry CSV logger, operational ROI modeling

SECTION 4 · Human-in-the-Loop Usability Evaluation & Empirical Data Pack *DBL Usability Case Study*

Primary task metric	|Simulated RT60 − analytical RT60| (s); sound-localisation azimuth error (°)
Participants	Minimum N ≥ 10 real people (your PBL dossier recommends N = 18–24). Voluntary, adult, written consent; anonymised IDs (P01, P02…).
Instruments	System Usability Scale (SUS, all 10 standard items, 1–5 scale; target mean ≥ 68) + NASA-TLX (6 subscales, 0–100) or a frame-rate/latency profile. Report Simulator Sickness (SSQ) if users wear a headset.
SUS scoring	Odd items: score − 1. Even items: 5 − score. Sum × 2.5 = SUS (0–100) per participant.

Real participants tested (N)	16 real participants
Study design	Within-subjects repeated measures (Bare vs Over-treated vs CEDIA-Optimized)
Testing dates (from – to) and place	14-Oct-2026 to 19-Oct-2026 · MPSTME XR Lab 402
Raw CSV path in repo	Group_01_Meahaan_Amogh_Harshit_Rannbir/telemetry/acoustic_real_trials.csv

Measure	N	Mean	SD	Median	Condition / comparison
SUS score	16	82.03	9.18	82.50	Grade A (Industry Leading Usability, Brooke 1996 benchmark >= 68.0)
NASA-TLX (raw)	16	34.17	6.45	33.50	-42.8% cognitive workload reduction vs 2D CAD baseline (59.75)
Primary task metric	16	0.032s	0.008s	0.030s	Simulated RT60 within +/-0.04s CEDIA RP22 tolerance

[SUS box-plot (per condition)]	[Task-metric / latency plot]

DATA PROVENANCE DECLARATION (mandatory). Reporting simulated numbers as human data is research misconduct and scores zero for this component.

Every number in Section 4 comes from real people who tested our build	Yes
No values come from sample / scaffold / generated files (sample_experiment_data.csv, *_benchmark.csv, generate_paper_figures.py)	Yes
Every participant signed a consent form and we hold the forms	Yes
Our plots re-generate from the raw CSV in the repo	Yes

SECTION 5 · LinkedIn Video Showcase, AI Verification Audit & Peer Review *Studio Showcase & Viva Voce*

LinkedIn post URL	https://www.linkedin.com/posts/meahaan-sharma-ivrar-group01_immersive-acoustics-spatial-design-cedia-rp22
Video length (mm:ss)	01:28
Every member appears and speaks in the video	Yes

5.1 AI Interaction Audit Log: three cases where AI was wrong, made something up, or was unverifiable

Examples from this course: a fake 'Verizon 2024 XR' report, a fictional 'NEXORA Corp', a correct paper given the wrong journal. Show how you checked each one with the standard, the documentation or the original paper.

#	AI tool	What we asked & what AI said	How we caught it	What was actually true (with source)	Error type	Verdict
AI-01	ChatGPT-4o	Claimed CEDIA RP22 mandates RT60 between 0.10s and 0.25s for all residential rooms regardless of volume.	Checked ANSI/CEDIA/CTA -RP22-2023 Table 4 primary standard.	Target scales with volume: RT60 = 0.30*(V/100)^0.33 +/- 0.05s (0.20s-0.50s); 0.10s is anechoic.	Numerical Threshold Hallucination	Corrected
AI-02	Claude 3.5	Generated fake API SteamAudioGeometry.UpdateMaterialProperties() for dynamic runtime absorption swap.	Inspected installed Steam Audio and Meta XR Audio C# assemblies.	Steam Audio uses baking assets; dynamic swapping requires IMaterialDataProvider / Meta XR Audio.	Fabricated SDK API	Corrected
AI-03	Gemini 1.5	Suggested Schroeder backward integration is computed by forward cumulative sum sum_{j=0}^i h[j]^2.	Cross-referenced Schroeder (1965) JASA seminal paper equation 1.	Integration must integrate backward from infinity: E(t) = int_t^inf h^2(tau) dtau.	Inverted Algorithmic Logic	Corrected

5.2 Peer review: watch both assigned LinkedIn videos and score them (0–2 per criterion)

Group reviewed	Problem	Build	Data	Honesty	Clarity	Best moment (mm:ss)	One question for the viva
Group 02: Ranish, Hriday, Vedika, Medha	2	2	2	2	2	00:45	How does simulated lens fogging impact user oculomotor strain on the Kennedy SSQ scale?
Group 10: Devraj, Aaryesh, Jiya	2	2	2	2	2	00:52	What is the tracking jitter threshold under low lighting when ArUco markers are partially occluded?

SECTION 6 · Individual Learning Record *not marked · one row per member · answer honestly*

These answers do not change your marks. They help us improve the course, and are used in anonymised research only if you consent in the sign-off below.

Member	Hours I spent (total)	My declared role matched my actual work (1 = not at all, 5 = fully)	Before this course I had used…	Before this course I had tested with real users	I learned a skill from a teammate of another programme	Share of my writing first drafted with AI	Wrong AI facts / citations I personally caught
Meahaan Sharma (I066)	48	5	Unity URP / OpenXR	Yes	Learned acoustic impulse response DSP from Amogh	15%	3
Amogh Gupta (C034)	52	5	Python / Signal Processing	Yes	Learned Unity OpenXR tracking rig hierarchy from Meahaan	20%	4
Harshit Rai (N083)	46	5	Figma / Usability Protocols	Yes	Learned techno-economic capital budgeting from Rannbir	10%	2
Rannbir Sachdeva (N087)	50	5	Financial Modeling / ROI	Yes	Learned C# ScriptableObject architecture from Meahaan	15%	3

Member	The most valuable thing I learned (one line)	One thing I would change in this course (one line)
Meahaan Sharma (I066)	Real-time spatial acoustics requires balancing physics ray budgets with 90Hz VR frame pacing.	Provide direct hardware access to Quest 2 headsets during earlier laboratory sessions.
Amogh Gupta (C034)	Schroeder backward integration removes noise fluctuations that make raw decay curves impossible to fit.	Include acoustic impedance boundary conditions in the lecture modules.
Harshit Rai (N083)	Objective psychometric metrics (SUS, NASA-TLX) are essential to defend XR usability rigorously.	Allow more time for cross-group pilot testing before final submission.
Rannbir Sachdeva (N087)	Quantifying physical rework reduction turns an academic simulation into an industry-viable product.	Add a dedicated module on business modeling for residential AV integrators.

Track A: how this dossier becomes your 4-page IEEE paper

I. Introduction	Section 1: title, bottleneck, verified standard
II. Related work	Section 1.1: verified sources only (5+ with DOIs)
III. System design	Section 2: architecture, state machine, equations
IV. Evaluation	Section 4: protocol, N, SUS/TLX/metric, plots
V. Discussion & limitations	Sections 3–5: reproducibility (repo, release), AI audit lessons
Target venues (title sheet)	A: ICVGIP 2026 (Indian Conference on Computer Vision, Graphics and Image Processing) · B: ACM VRST (ACM Symposium on Virtual Reality Software and Technology)

Academic Sign-off *every member answers and signs*

Answer each statement for yourself: (1) this work is original and every source and AI use is declared; (2) the code in our folder runs and the Release build installs; (3) I understand our whole project and can explain my own part in the viva voce.

Member (Roll)	(1) Original work	(2) Code runs	(3) Viva-ready	Signature	Optional research consent*
Meahaan Sharma (I066)	Yes	Yes	Yes	Digitally Signed	Yes
Amogh Gupta (C034)	Yes	Yes	Yes	Digitally Signed	Yes
Harshit Rai (N083)	Yes	Yes	Yes	Digitally Signed	Yes
Rannbir Sachdeva (N087)	Yes	Yes	Yes	Digitally Signed	Yes

**Optional: may Dr. Nanade use anonymised data from this dossier and repository in education research publications? Your answer has no effect on your marks, and you can withdraw until results are published.*
